NON-FINAL REJECTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9/10/2008 has been entered.

The rejections over Uchida et al (US 6,731,919), Chemla (U.S Patent No. 5,805,403) in view of Yamazaki (JP409212254) and Kitano (U.S Patent No. 5,870,267) have been withdrawn in view of the amendments to the claims.

Claims Rejections

Claim Rejections - 35 USC § 112

Claims 1 and 4-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Correction or clarification is required.

In claim 1, it is unclear how the recitation "the temperature sensor configured to detect under and over temperature conditions", "logic circuitry" and "system clock" is read on the preferred embodiment. Insofar as understood, no such limitation is seen on the drawings. Also, it is not understood what the "logic circuitry" is, how the filter can "prevent" the system clock when it is not connected to the system clock and the logic circuitry, and if the recitation "a predetermined temperature" on line 6 is additional "temperature" or further recitation of the previously claimed "temperature" on line 5.

Application/Control Number: 10/727,198

Art Unit: 2816

Page 3

In claim 4, the recitation "the predetermined temperature" on line 2 lacks clear antecedent

basis and what the "frequency range" is. The same is true for claim 5.

In claim 5, it is unclear what the "some or all of the logic circuitry" are.

In claim 6, it is unclear what the "unpredictable logical behavior" is.

The remaining claimed are dependent from claim 1 and therefore also considered

indefinite.

Response to Applicant's Arguments

The applicant's arguments over Uchida et al (US 6,731,919), Chemla (U.S Patent No.

5,805,403) in view of Yamazaki (JP409212254) and Kitano (U.S Patent No. 5,870,267) are

moot without traverse.

Allowable Subject Matter

Claims 1 and 4-6 would be allowable if rewritten or amended to overcome the

rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action. These claims are

allowed because the prior art of record fails to suggest "integrated circuit including a clock filter

having a temperature sensor configured to detect a under and over temperature conditions of the

integrated circuit" as combined in claim 1.

Conclusion

Application/Control Number: 10/727,198 Page 4
